Keyboard Layout

The keyboard layout is described in terms of an IPA chart rather than a keyboard. This is because many base characters are typed as a sequence of a letter followed by one of <, >, = or | which are characters used to change a base character to another base character. Diacritics are typed as sequences of an appropriate key. **Blue denotes non-IPA sanctioned phonetic symbols (they may be used by other traditions such as Americanist, Chinese or Russian).** **Red denotes characters which are not in Unicode (they are in SIL's corporate PUA and will not likely be found in any other font).**

² Glides to and from any level (e.g. “#32” becomes ɿ) and any sequence of any two glides (e.g. “#314” becomes ɿ).
