

UCA Chart Help

This set of charts shows the Unicode Collation Algorithm values for Unicode characters. The characters are arranged in the following groups:

- Null** **Completely ignoreable (primary, secondary and tertiary levels)**
These include control codes and various formatting codes.
- Ignorable** **Ignorable at a primary level, but not at a secondary or tertiary level.**
These include most accents and diacritics.
- Variable** **Characters that may be set to ignorable by a programmatic switch.**
These include spaces, punctuation marks, and most symbols.
- Common** **Characters that are none of the above, but not considered letters.**
These include numbers, currency symbols, etc.
- Letters** **According to script**
- Unsupported** **Not explicitly supported in this version of UCA; uses code-point order**

The characters* within each group are arranged in cells. The color of the cell indicates the strength of the difference between that character and the *previous* character in the chart, as follows.

<u>No Expansion</u>		<u>Expansion</u>	
a 0061	Primary difference	dz 01F3	Primary difference
á 00E1	Secondary Difference	DZ 01F1	Secondary Difference
À 0041	Tertiary difference	Dz 01F2	Tertiary difference
Ā 212B	Quarternary difference or no difference		Quarternary difference or no difference

Characters which are displayed in blue are not in the Doulos SIL font.

Cells which are displayed in red are in SIL's Private Use Area and are not part of Unicode or the original document.

* In some cases, the UCA data table also includes contractions.

They can be recognized by the multiple code point numbers, as in the following:

Notes

- The UCA results are versioned *both* by the version of the UCA *and* by the version of The Unicode Standard used to process the data.
- These charts only provide one of the alternatives for handling variable characters (punctuation), whereby these characters are **non-ignorable**.
- Characters from large blocks, such as CJK-Ideographs, Hangul Syllables, Private Use Area, etc. are represented by a sampling.
- Some unassigned code points, noncharacters and other edge cases are also added to the list for comparison.
- For more information, see [UTS #10: Unicode Collation Algorithm](#).
