Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 639-3 was prepared by Technical Committee ISO/TC 37, *Terminology and other language resources*, Subcommittee SC 2, Terminography and lexicography.

This second/third/... edition cancels and replaces the first/second/... edition (), [clause(s) / subclause(s) / table(s) / figure(s) / annex(es)] of which [has / have] been technically revised.

ISO 639 consists of the following parts, under the general title *Codes for the representation of names of languages*:

- *Part 1: Alpha-2 code*
- *Part 2: Alpha-3 code*
- *Part 3: Alpha-3 code for comprehensive coverage of languages*

Introduction

ISO 639 provides three language codes: one is a two-letter code (ISO 639-1) and two others are three-letter codes (ISO 639-2 and ISO 639-3) for the representation of names of languages. ISO 639-1 was devised primarily for use in terminology, lexicography and linguistics. ISO 639-2 was devised primarily for use in terminology and bibliography. It represents all languages contained in ISO 639-1 and in addition other languages and language collections of interest for those primary applications. ISO 639-3 was devised to provide a comprehensive set of identifiers for all languages for use in a wide range of applications, including linguistics, lexicography and internationalisation of information systems. It attempts to represent all known languages.

The three-letter codes in ISO 639-2 and ISO 639-3 are complementary and compatible. The two codes have been devised for different purposes. The set of individual languages listed in ISO 639-2 is a subset of those listed in ISO 639-3. The codes differ in that ISO 639-2 includes code elements representing some individual languages and also collections of languages, while ISO 639-3 includes code elements for all known individual languages but not for collections of languages. Overall, the set of individual languages listed in ISO 639-3 is much larger than the set of individual languages listed in ISO 639-2.

The languages represented in ISO 639-1 are a subset of those represented in ISO 639-2; every language code element in the two-letter code has a corresponding language code element in ISO 639-2, but not necessarily vice versa. Likewise, elements other than collections listed in ISO 639-2 are a subset of those listed ISO 639-3; each non-collective element in ISO 639-2 is included in ISO 639-3, but not necessarily vice versa. The denotation represented by alpha-3 identifiers included in both ISO 639-2 and ISO 639-3 is the same in each standard, and the denotation represented by alpha-2 identifiers in ISO 639-1 is the same as that represented by the corresponding alpha-3 identifiers in ISO 639-2 and ISO 639-3.

The large number of languages in the initial inventory of ISO 639-3 beyond those already included in ISO 639-2 was derived primarily from *Ethnologue* [1], with additional ancient, historic or artificial languages obtained from *Linguist List* [2], [3].

All three language codes are to be considered as open lists. The codes were devised for use in a broad range of applications, including terminology, lexicography, information and documentation (i.e. for libraries, information services, and publishers), and linguistics. This part of ISO 639 also includes guidelines for the creation of language code elements and their use in some applications.

Codes for the representation of names of languages — Part 3: Alpha-3 code for comprehensive coverage of languages

1 Scope

This part of ISO 639 provides a code consisting of language code elements comprising three-letter language identifiers for the representation of languages. The language identifiers according to this part of ISO 639 were devised for use in a wide range of applications, especially in computer systems, where there is potential need to support a large number of the languages that are known to have ever existed. Whereas ISO 639-1 and ISO 639-2 are intended to focus on the major languages of the world that are most frequently represented in the total body of the world's literature, this part of ISO 639 attempts to provide as complete an enumeration of languages as possible, including living, extinct, ancient and constructed languages, whether major or minor. As a result, this part of ISO 639 lists a very large number of lesser-known languages. Languages designed exclusively for machine use, such as computer-programming languages, and reconstructed languages are not included in this code.

Knowledge of the world's languages at any given time is never complete or perfect. Additional language identifiers may be created for this list when it becomes apparent that there is a linguistic variety that is deemed to be distinct from other languages in accordance with the definitions in clause 3 and their elaboration in clause 4. In addition, the denotation of existing identifiers may be revised or identifiers may become deprecated when it becomes apparent that they do not accurately reflect actual language distinctions. In all such changes, careful consideration is given to ensure existing implementations are not adversely affected.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 15924:2004, *Code for the Representation of Names of Scripts*.

3 Terms and definitions

For the purposes of this part of ISO 639, the following terms and definitions apply.

3.1

code

data transformed or represented in different forms according to a pre-established set of rules

3.2

code element

individual entry in a code table

3.3

language identifier

language symbol

symbol that uniquely identifies a particular language

NOTE In the language code in this part of ISO 639, each language identifier is composed of three letters.

NOTE In this part of ISO 639, each language identifier represents one or more language names that designate a particular language.

3.4

name

reference name

linguistic expression used to designate an individual concept

NOTE In this part of ISO 639, a language name is used to designate the concept of a particular language.

NOTE In this part of ISO 639, names used to designate a language may be expressions taken from one or more specified source languages, such as English or French. It is not guaranteed, however, that a complete set of names from any particular language will be provided, or that the source language for any name will be indicated.

NOTE In this part of ISO 639, a language name is considered normative insofar as it designates a particular language. The actual form of a name is not immutable.

3.5

language code element

a **code element** in a language code table

NOTE In the language code table of this part of ISO 639, each language code element consists of a language identifier and one or more language names.

3.6

scope

an attribute of a **language code element** that pertains to the breadth of language varieties to which it corresponds, and the relationship that that language code element has to other language code elements

NOTE For the purposes of this part of ISO 639, language code elements have one of three scopes: individual language, macrolanguage or collection.

3.7

individual language code element

a **language code element** representing an individual language

NOTE The language represented by an individual language code element is considered distinct from those represented by any other individual language code element; thus, there is no correspondence between different individual language code elements. The notion of *individual language* is explained further in 4.2.1.

3.8

macrolanguage code element

a **language code element** representing multiple, closely-related individual languages that are deemed in some usage contexts to be a single language

NOTE Every macrolanguage code element has a normative correspondence to the individual language code elements representing the individual languages encompassed by the macrolanguage. This normative relationship between macrolanguage code elements and individual language code elements is documented in the code tables included in this part of ISO 639. The notion of *macrolanguage* is explained further in 4.2.2.

3.9

collective language code element

a **language code element** representing a group of individual languages that are not deemed to be one language in any usage context

NOTE The language code in this part of ISO 639 does not include collective language code elements.

4 Three-letter language code

4.1 Form of the language identifier

The language identifiers consist of a sequence of three letters each taken from the following set of 26 letters of the Latin alphabet in lower case: a, b, c, d, e, f, g, h, i, j, k, l, m, n, o, p, q, r, s, t, u, v, w, x, y, z. No diacritical marks or modified characters are used.

Language identifiers are not intended to be an abbreviation for a name of the language, but to serve as a device to identify a given language uniquely. With thousands of languages, many pairs of which have similar names, it is not possible to provide identifiers that resemble a language name in every case. In many cases, language identifiers do bear some resemblance to a name for the language, but this is not guaranteed. Many languages have alternate names used by different internal or external communities. In such cases, the form of the language identifier does not imply that a name resembling the language identifier is considered to be preferred.

To ensure continuity and stability, the identifier for any given language shall not be changed, though the names listed in relation to an identifier may change (see 4.5.2). On occasion, given compelling reasons, a code element may become retired from current use. When a code element is retired, the identifier for that code element shall not be reassigned.

When adapting this International Standard to languages that are written using non-Latin scripts (e.g. the Cyrillic alphabet), language identifiers shall be formed using the Latin alphabet according to the principles of this part of ISO 639.

4.2 Denotation of the language identifier

A language identifier represents one or more language names, each of which designates some language. The ultimate objects of identification are languages themselves; language names are the formal means by which the languages denoted by language identifiers are designated.

Languages are not static objects every instantiation of which is identical to every other; every language corresponds to some range of variation in linguistic expression. In this part of ISO 639, then, a language identifier denotes some range of language varieties. The range of varieties that are denoted can have three different scopes: individual language, macrolanguage or collection. Also, languages that are represented can be of various types: living languages, ancient languages, artificially constructed languages, etc. The following provides further explanation regarding assignment of identifiers for different scopes or to different types of languages in this part of ISO 639.

4.2.1 Individual languages

In this part of ISO 639, most identifiers are assumed to denote distinct individual languages. Furthermore, it is a goal for this part of ISO 639 to provide an identifier for every distinct human language that has been documented, whether living or extinct, and whether its modality is spoken, written or signed.

There is no one definition of "language" that is agreed upon by all and appropriate for all purposes. As a result, there can be disagreement, even among speakers or linguistic experts, as to whether two varieties represent dialects of a single language or two distinct languages. For this part of ISO 639, judgments regarding when two varieties are considered to be the same or different languages are based on a number of factors, including linguistic similarity, intelligibility, a common literature, the views of speakers concerning the relationship between language and identity, and other factors. The following basic criteria are followed:

- Two related varieties are normally considered varieties of the same language if speakers of each variety have inherent understanding of the other variety (that is, can understand based on knowledge of their own variety without needing to learn the other variety) at a functional level.

- Where spoken intelligibility between varieties is marginal, the existence of a common literature or of a common ethnolinguistic identity with a central variety that both understand can be strong indicators that they should nevertheless be considered varieties of the same language.
- Where there is enough intelligibility between varieties to enable communication, the existence of well-established distinct ethnolinguistic identities can be a strong indicator that they should nevertheless be considered to be different languages.

Some of the distinctions made on this basis may not be considered appropriate by some users or for certain applications. These basic criteria are thought to best fit the intended range of applications, however (see 4.6).

4.2.2 Macrolanguages

Other parts of ISO 639 have included identifiers designated as individual language identifiers that correspond in a one-to-many manner with individual language identifiers in this part of ISO 639. For instance, this part of ISO 639 contains over 30 identifiers designated as individual language identifiers for distinct varieties of Arabic, while ISO 639-1 and ISO 639-2 each contain only one identifier for Arabic, "ar" and "ara" respectively, which are designated as individual language identifiers in those parts of ISO 639. It is assumed here that the single identifiers for Arabic in parts 1 and 2 of ISO 639 correspond to the many identifiers collectively for distinct varieties of Arabic in part 3 of ISO 639.

In this example, it may appear that the single identifiers in ISO 639-1 and ISO 639-2 should be designated as collective language identifiers. That is not assumed here, however. In various parts of the world, there are clusters of closely-related language varieties that, based on the criteria discussed in 4.2.1, can be considered individual languages, yet in certain usage contexts a single language identity for all is needed. Typical situations in which this need can occur include the following:

- There is one variety that is more developed and that tends to be used for wider communication by speakers of various closely-related languages; as a result, there is a perceived common linguistic identity across these languages. For instance, there are several distinct spoken Arabic languages, but Standard Arabic is generally used in business and media across all of these communities, and is also an important aspect of a shared ethno-religious unity. As a result, a perceived common linguistic identity exists.
- There is a common written form used for multiple closely-related languages. For instance, multiple Chinese languages share a common written form.
- There is a transitional socio-linguistic situation in which sub-communities of a single language community are diverging, creating a need for some purposes to recognise distinct languages while, for other purposes, a single common identity is still valid. For instance, in some business contexts it is necessary to make a distinction between Bosnian, Croatian and Serbian languages, yet there are other contexts in which these distinctions are not discernable in language resources that are in use.

Where such situations exist, an identifier for the single, common language identity is considered in this part of ISO 639 to be a macrolanguage identifier.

Macrolanguages are distinguished from language collections in that the individual languages that correspond to a macrolanguage must be very closely related, and there must be some domain in which only a single language identity is recognized.

4.2.3 Dialects

The linguistic varieties denoted by each of the identifiers in this part of ISO 639 are assumed to be distinct languages and not dialects of other languages, even though for some purposes some users may consider a variety listed in this part of ISO 639 to be a "dialect" rather than a "language" (see 4.2.1 and 4.2.2). In this standard, the term *dialect* is used as in the field of linguistics where it simply identifies any sub-variety of a language such as might be based on geographic region, age, gender, social class, time period, or the like. This contrasts with a popular usage in which "dialect" is typically construed to connote a substandard or undeveloped form of language.

The dialects of a language are included within the denotation represented by the identifier for that language. Thus, each language identifier represents the complete range of all the spoken or written varieties of that language, including any standardized form.

For applications in which it is necessary to identify dialects, a separate standard may be developed that provides identifiers for dialects, or that combines identifiers from this or other parts of ISO 639 with other distinguishing identificational qualifiers.

4.2.4 Collective language code elements

Whereas ISO 639-2 includes identifiers for collections of languages and also uses three-letter identifiers, this part of ISO 639 provides identifiers for individual languages and macrolanguages only.

4.2.5 Extinct, ancient and historic languages

This part of ISO 639 includes identifiers that denote extinct languages as well as living languages. The criteria for identifying distinct languages in the case of varieties that have gone extinct in recent times are as defined above. In the case of ancient languages, a criterion based on intelligibility would be ideal, but in the final analysis, identifiers will be assigned to ancient languages which have a distinct literature and are treated distinctly by the scholarly community. In order to qualify for inclusion in this code, the language must have an attested literature or be well-documented as a language known to have been spoken by some particular community at some point in history; it may not be a reconstructed language inferred from historical-comparative analysis. The code also includes identifiers that denote historic languages that are considered to be distinct from any modern languages that may be descended from them; for instance, Old English and Middle English. Here, too, the criterion is that the language have a literature that is treated distinctly by the scholarly community.

4.2.6 Constructed languages

This part of ISO 639 includes identifiers that denote constructed (or artificial) languages that meet the following criteria:

- The language has a literature.
- The language is designed for the purpose of human communication.

Specifically excluded are reconstructed languages and computer programming languages.

4.2.7 Scripts

A single language identifier is provided for a language even though the language may be written in more than one script. For applications in which it is necessary to identify distinct writing systems of a single language, a separate standard may be developed that combines identifiers from this or other parts of ISO 639 with script identifiers from ISO 15924. For a discussion of some of the issues involved in identification of categories different from but related to language, such as writing systems, see Constable (2002) [4]. For an example of a separate protocol that combines identifiers from ISO 639 with script identifiers from ISO 15924, see Phillips and Davis (2004) [5].

4.2.8 Local-use identifiers

Identifiers qaa through qtz are reserved for local use. These identifiers may only be used locally, and may not be exchanged internationally.

4.3 Documentation of the intended denotation of identifiers

This part of ISO 639 provides a code table consisting of a set of language code elements. The normative content of each language code element consists of two parts: a language identifier, and the individual

language denoted by that identifier as designated by one or more language names (see 3.3 and 3.4). Although the names are normative with respect to this part of ISO 639 in the form in which they appear, this is only insofar as they designate particular languages. The use of names within this part of ISO 639 does not imply that these names or the particular spellings that are used have any special status within the language communities or any other domain of usage. The names provided serve only as the normative documentation of the particular language denoted by each identifier. The names are not immutable: a name may be revised in the course of maintaining the language code table so long as the language that is designated remains unchanged.

A language identifier must be associated in the code table with at least one name that uniquely designates the given language being identified. The source language from which the name is obtained need not be specified provided the designation is considered clear. The Registration Authority for this part of ISO 639 (see 4.5.1) may choose to list language names from multiple source languages so long as there is a single language concept designated.

In actual practice, language names often do not provide sufficient information to guide a user in determining unambiguously the intended denotation of a language identifier. This is especially a problem for pairs of unrelated languages that happen to share similar names. To facilitate unambiguous documentation of the intended denotation of each identifier, the Registration Authority for this part of ISO 639 (see 4.5.1) may provide additional informative information regarding any given language, such as estimated population, genetic classification or geographic distribution of speaker communities.

4.4 Relationship between ISO 639-2 and ISO 639-3

The alpha-3 codes for ISO 639-2 and ISO 639-3 overlap. In particular, every individual language code element in the terminology code of ISO 639-2 is also included in ISO 639-3. One is not a subset of the other, however: the collective language code elements in ISO 639-2 have no counterpart in ISO 639-3, and there are many individual language code elements in ISO 639-3 that have no counterpart in ISO 639-2. The alpha-3 identifiers for these two non-intersecting sets of code elements are guaranteed to be distinct; that is, every alpha-3 language identifier has a single denotation across the union of code elements from all parts of ISO 639.

The nature of ISO 639-2 is such that it gives preference to developed languages, whereas ISO 639-3 attempts to include all languages. When a request is made to add a new individual language code element to ISO 639-2, that individual language will generally already be listed as part of ISO 639-3. Thus, addition of individual language code elements to ISO 639-2 will generally involve adoption of code elements already existing in ISO 639-3.

Some existing code elements in ISO 639-2, and the corresponding code elements in ISO 639-1, are designated in those parts of ISO 639 as individual language code elements, yet are in a one-to-many relationship with individual language code elements in this part of ISO 639. For purposes of this part of ISO 639, they are considered to be macrolanguage code elements.

In certain cases, a macrolanguage code element in ISO 639-2 or ISO 639-1 may have the same name as one of the individual languages in ISO 639-3 that falls within its scope. In order to preserve unique names within ISO 639-3, the qualifier “(generic)” is added to the name for the macrolanguage code element when listed in the code tables for this part of ISO 639. This does not imply any change to the name within any other part of ISO 639. Similarly, the qualifier “(specific)” is added to the name for the corresponding individual language code element.

ISO 639-2 includes two code sets, a terminology code and a bibliographic code, that differ in the identifiers used to represent certain languages. Thus, in a small number of cases, a given language is assigned a terminology-code language identifier and a distinct bibliographic-code language identifier. The corresponding code elements in ISO 639-3 use the terminology-code identifier from ISO 639-2; no bibliographic-code language identifier from ISO 639-2 is used in ISO 639-3. The assignment of distinct bibliographic-code identifiers in ISO 639-2 has no impact on ISO 639-3 except for the need to co-ordinate the use of alpha-3 identifiers such that every assigned alpha-3 identifier shall have a unique denotation across the union of code elements from all parts of ISO 639. Co-ordination of the use of alpha-3 identifiers shall be done in accordance with A.1.3.

The existence of collective language code elements in ISO 639-2 has no impact on ISO 639-3 except for the need to co-ordinate the use of alpha-3 identifiers such that identifiers for collective language code elements in ISO 639-2 shall not be used as identifiers for any code element in ISO 639-3. Co-ordination of the use of alpha-3 identifiers shall be done in accordance with A.1.3.

The individual language code elements in ISO 639-2 are generally not adequate to document the range of individual languages encompassed by collective language code elements in ISO 639-2. The denotation of collective language code elements in ISO 639-2 should be clearly documented by enumeration of the individual language code elements in ISO 639-3 that they encompass. Such documentation may be provided in another part of ISO 639 but is not provided in this part of ISO 639.

4.5 Registration Authority and maintenance of the code

4.5.1 Registration Authority

The Registration Authority for this part of ISO 639 is the Summer Institute of Linguistics, Inc. (SIL International), 7500 W. Camp Wisdom Rd., Dallas, TX 75236, USA. The Registration Authority for ISO 639-1 is the International Information Centre for Terminology (Infoterm), Aichholzgasse 6/12, AT 1120 Vienna, Austria. The Registration Authority for ISO 639-2 is the Library of Congress, Washington, D.C., 20540 USA (c/o Network Development and MARC Standards Office).

4.5.2 Maintenance of the code

As knowledge of human languages at any given point in time is never complete or perfect but is always expanding, and given the comprehensive nature of the code, it is expected that changes to the code will occur. Care shall be taken in making such changes to ensure that existing uses of the code are not seriously compromised.

To ensure continuity and stability, the identifier for any given language shall not be changed. On occasion, given compelling reasons, a code element may be retired from current use. When a code element is retired, the identifier for that code element shall not be reassigned.

The names of languages listed for a given identifier may be changed given sufficient reasons without implying any change in intended denotation.

Given sufficient reasons, new code elements may be added, or the denotation for a given code element may be broadened. The denotation of a code element shall not be narrowed, however, as this can result in an unknown proportion of the existing uses of a code element becoming invalid. If it is determined that the denotation of a code element was too broad, such as if a linguistic variety that was thought to be a dialect of a given language was later determined to be a distinct language, the existing code element would be retired and replaced with two new code elements.

If a language variety thought to be a distinct language is found on further investigation to be a dialect variant encompassed by another language, the former denotation may be merged into the latter. This has the result of broadening the latter denotation. The code element for the former variety will be retired, and the relationship to the code element for the latter denotation will be documented.

Retired code elements remain part of the code and retain their identifier and denotation. Continued use in existing data or implementations remains a valid application of this standard. On-going generation of data using a retired code element is generally discouraged, however.

When changes to an existing code element are made, clear indication shall be provided as to whether the change affects only the names, only the denotation, or both.

Requests for additions or changes to the code table for this part of ISO 639 should be submitted to the ISO 639-3/RA (see Annex A).

4.6 Application of language identifiers

Language identifiers from this part of ISO 639 can be used in a wide variety of applications. This includes but is not limited to the following instances.

- a) To indicate the language in which documents are or have been written or recorded.

EXAMPLE

A community health booklet is translated into Gawwada, and indexed in the development agency's records under gwd (language identifier gwd used for Gawwada).

- b) To indicate the language of items in a corpus of linguistic data.

EXAMPLE

Items from a Hopi word list are stored in a database using hop as a partial key (language identifier hop used for Hopi).

- c) To indicate the language to which software resources apply.

EXAMPLE

A spelling checker for Sichuan Yi is indexed within a software system using iii (language identifier iii used for Sichuan Yi).

- d) To indicate the language-speaking capabilities of interpreters.

EXAMPLE

A personnel database tags a record for a Thai-Khmu interpreter using tha and kjg (language identifier tha used for Thai and language identifier kjg used for Khmu).

5 Lists of language identifiers

The language code for this part of ISO 639 is presented in three tables:

- Table 1: Alpha-3 code arranged alphabetically by reference name of language
- Table 2: Alpha-3 code arranged alphabetically by language identifier
- Table 3: Mapping of macrolanguage code elements to individual language code elements

These tables are not published as part of or as an annex to this document. The Registration Authority shall maintain current lists of code elements published on the World Wide Web. [Drafter's note: The tables are included here in this draft, but the current plan is to publish it separately.]

[Drafter's note: One additional table is provided for review purposes that will not be included in ISO 639-3. This table (Table 4) shows code elements that are treated like individual languages in ISO 639-2 but that are not included in the draft code tables for ISO 639-3 as the analysis done in preparing ISO 639-3 suggests that they should be reanalyzed as collections. This has been proposed to the ISO 639/RA-JAC; their decision is pending.]

Table 1 —Alpha 3 code arranged alphabetically by reference name of language

This table includes the following information for each code element:

- Reference Name (normative)
- ID: code element identifier (normative)
- Scope (informative): “M” signifies a macrolanguage code element; unmarked code elements are individual language code elements
- Part 2 (informative): an asterisk, “*”, signifies that the code element is included in the terminology code of ISO 639-2
- Status: “*dep*” signifies a deprecated (retired) code element

Table 2 — Alpha-3 code arranged alphabetically by language identifier

This table includes the following information for each code element:

- ID: code element identifier (normative)
- Reference Name (normative)
- Scope (informative): “M” signifies a macrolanguage code element; unmarked elements are individual language code elements
- Part 2 (informative): an asterisk, “*”, signifies that the code element is included in ISO 639-2
- Status: “*dep*” signifies a deprecated (retired) code element

Table 3: Mapping of macrolanguage code elements to individual language code elements

This table includes the following information for each macrolanguage code element:

- M identifier: the identifier for a given macrolanguage code element (normative)
- M name: the name for a given macrolanguage code element
- Macrolanguage mapping (normative): a comma-delimited list of identifiers for the individual language code elements encompassed by the given macrolanguage code element

M identifier	M name	Macrolanguage mapping
aka	Akan	fat, twi
ara	Arabic	ayl, acm, ars, ayp, acx, aec, ayn, ajp, acw, ary, arb, pga, apd, acq, abh, aeb, auz, ssh, abv, apc, ayh, aao, bbz, shu, acy, adf, avl, arz, afb, arq
aym	Aymara	ayr, ayc
aze	Azerbaijani	azj, azb
bal	Baluchi	bcc, bgn, bgp
bik	Bikol	bto, cts, bcl, bhk, bln
bua	Buriat	bxm, bxu, bxr
chm	Mari (Russia)	mrj, mhr
cre	Cree	crj, crm, crk, csw, cwd, crl
del	Delaware	umu, unm
den	Slave (Athapascan)	xsl, scs
din	Dinka	dip, diw, dib, dks, dik
doi	Dogri (generic)	dgo, xnr
fas	Persian	prs, pes
fry	Frisian	frs, fr, fri
ful	Fulah	fug, fuf, fuh, fuc, fue, fui, fub, fuv, ffm
gba	Gbaya (Central African Republic)	gya, mdo, gbp, gbq, bdt
gon	Gondi	gno, ggo
grb	Grebo	gry, grv, gec, gbo, grj
grn	Guarani	gui, gnw, gun, gug, nhd
hai	Haida	hdn, hax
hbs	Serbo-Croatian	bos, hrv, srp
hmn	Hmong	hms, blu, hmc, hmm, hmj, hme, hmq, muq, hml, hmd, huj, hmi, mww, hea, hma, hmp, hmg, hmh, hmw, mmr, hmy
iku	Inuktitut	ike, ikt
ipk	Inupiaq	esi, esk
jrb	Judeo-Arabic	yhd, jye, ajt,aju, yud
kau	Kanuri	knc, kby, krt
kok	Konkani (generic)	knn, gom
kom	Komi	koi, kpj
kon	Kongo	ldi, kwy, kng
kpe	Kpelle	xpe, gkp
kur	Kurdish	kmr, sdh, ckb
lah	Lahnda	hno, hnd, jat, xhe, pmu, pnb, skr, phr
man	Mandingo	mnk, mlq, mwk, myq, emk, mku, msc
mlg	Malagasy	txy, xmv, bhr, bmm, skg, plt, bjq, xmw, msh, tdx
mon	Mongolian	khk, mvf
msa	Malay (generic)	mly, msi, btj, bve, bv, coa, jax, meo, mqg, xmm, max, mfa, vkt
mwr	Marwari	mve, mtr, mtr, dhd, svv, rwr, wry
nor	Norwegian	nob, nno
oci	Occitan (post 1500); Provençal	auv, gsc, lnc, lms, prv
oji	Ojibwa	otw, ojg, ojw, ciw, ojc, ojs, ojb
orm	Oromo	qax, hae, gaz, orc
pus	Pushto	pst, pbu, pbt
que	Quechua	qva, qxu, quy, qvc, qvl, quk, cqu, qxc, qxa, qwc, qwa, quz, qve, qub, qvh, qwh, qvw, qxw, quf, qvm, qvo, qul, qvn, qxq, qvp, qxh, qxp, qvs, qxt, qws, quh, qxo, qup, qur, qux, qud, qxr, qug, qvi, qvj, qvz, qxl, qus, quw
raj	Rajasthani	mup, wbr, gda, hoj, bgq, gju
rom	Romany	rmn, rml, rmc, rmf, rmo, rmy, rmw
sqi	Albanian	aae, aat, als, aln
srd	Sardinian	sdn, sdc, src, sro
swa	Swahili (generic)	swh, swc

M identifier	M name	Macrolanguage mapping
syr	Syriac	aii, cld
tmh	Tamashek	thz, taq, ttq, thv
uzb	Uzbek	uzn, uzs
yid	Yiddish	ydd, yih
zap	Zapotec	zaq, zpo, zoo, zaf, zad, zpv, zpc, zca, zps, zpp, zte, zpg, ztu, zai, zpa, ztc, zpl, ztp, zpy, zam, zaw, zpm, zac, zao, zpe, zpj, ztq, zar, ztm, zpx, zab, zpf, zpt, ztn, zpn, zpi, ztl, zpr, zas, zaa, zpd, zsr, zat, ztt, zpz, zts, zpk, zph, zax, ztg, zpu, zae, zty, zav, zpb, ztx, zpw, zpq
zha	Zhuang	ccx, ccy
zho	Chinese	czo, mnp, yue, hsn, wuu, cpx, gan, nan, cmn, cjt, czh, hak, cdo

Table 4: ISO 639-2 code elements excluded from ISO 639-3

[Drafter's note: this table is provided for review purposes only and will not be published as part of ISO 639-3.]

This table lists code elements from ISO 639-2 that are named like individual language code elements in that standard but that are excluded from ISO 639-3 because they have been reanalyzed as collections.

Identifier	Name
bad	Banda
bih	Bihari
btk	Batak (Indonesia)
day	Dayak
him	Himachali
ijo	Ijo
kar	Karen
kro	Kru
nah	Nahuatl
son	Songhai
znd	Zande

Annex A (normative)

Procedures for the Registration Authority and Registration Authorities Advisory Committee for ISO 639

A.1 Mandates

A.1.1 Registration Authority ISO 639-3/RA

A Registration Authority for this part of ISO 639 is established to maintain and publish the alpha-3 code of this part of ISO 639.

The Summer Institute of Linguistics, Inc. (SIL International), 7500 W. Camp Wisdom Rd., Dallas, Texas 75236, USA, has been designated as the Registration Authority for this part of ISO 639 (ISO 639-3/RA). It is responsible for the registering and maintenance of this alpha-3 language code according to these procedures.

A.1.2 Joint Advisory Committee ISO 639/RA-JAC

The Joint Advisory Committee (ISO 639/RA-JAC) that is established in ISO 639-1, A.3 and ISO 639-2, A.3 also functions to advise the ISO 639-3/RA Registration Authority and monitor the activities of the Registration Authority to ensure the application of the coding rules as laid down in ISO 639-3.

A.1.3 Relationship between ISO 639-3/RA, ISO 639-1/RA, ISO 639-2/RA and ISO 639/RA-JAC

The ISO 639-3/RA may make decisions regarding the addition of new code elements or changes to existing code elements that are included in ISO 639-3 only. The ISO 639-3/RA shall not make unilateral decisions regarding changes to existing code elements that are included in ISO 639-2, but rather will consult with the Registration Authorities for Part 1 and Part 2 of ISO 639 and with the ISO 639/RA-JAC regarding such changes. Similarly, the ISO 639-2/RA shall consult with the ISO 639-3/RA regarding changes to any code elements that are listed in both ISO 639-3 and ISO 639-2. The ISO 639-2/RA and ISO 639-3/RA shall cooperate in changes or additions to alpha-3 identifiers.

The ISO 639/RA-JAC shall advise the ISO 639-3/RA and oversee the activity of the ISO 639-3/RA to ensure adherence to the requirements of this part of ISO 639. The ISO 639-3/RA may consult with the ISO 639/RA-JAC on any proposed additions or changes to the code.

A.2 Responsibilities of the Registration Authority

A.2.1 Application for the registration of new code elements and for the change of existing code elements

The ISO 639-3/RA shall receive and review applications for the registration of new code elements and for the change of existing ones. It shall act on such applications when the application meets the following criteria:

- The applicant has provided basic identificational information like name, affiliation, and email address.
- The applicant has provided suitable documentary evidence supporting the requested addition or change.

When these criteria are met, the ISO 639-3/RA will make a determination according to the rules given in A.2.3 and A.2.4, and inform the applicant of the result of ISO 639-3/RA actions. The ISO 639-3/RA may consult with domain experts in the process.

A.2.2 Maintenance of the list

ISO 639-3/RA shall maintain an accurate list of information associated with registered language code elements. If necessary, it shall safeguard any confidential information. It shall process updates of registered language identifiers and distribute them on a regular basis to subscribers and other parties.

A.2.3 Reservation of identifiers

When a request for inclusion of a new code element in ISO 639-3 has been rejected, a request that the identifier be reserved for the use of the applicant and other possible users may be considered by the ISO 639-RA/JAC. ISO 639-3/RA will keep a record of such reservations and will inform the ISO 639-1/RA and ISO 639-2/RA of such.

A.2.4 Creation of language identifiers

The creation of language identifiers is subject to the rules described in ISO 639-1, 4.1, ISO 639-2, 4.1 and ISO 639-3, 4.1.

A.2.5 Other general responsibilities

ISO 639-3/RA shall do the following:

- handle all aspects of the registration process in accordance with good business practice;
- indicate in operations that it has been designated as ISO 639-1/RA by ISO;
- provide a periodic report to the ISO-639/RA-JAC of all change requests that have been processed;
- provide an annual summary report on its activity to ISO Central Secretariat as well as to ISO/TC 37 and ISO/TC 46 Secretariats;
- provide advice on implementation and use of this part of ISO 639, as needed.

A.3 Composition and responsibilities of the Joint Advisory Committee ISO 639/RA-JAC

The composition and responsibilities of ISO 639/RA-JAC are defined in ISO 639-1, A.3 and ISO 639-2, A.3. This part of ISO 639 adds the following to the definition:

- ISO 639/RA-JAC shall include one representative of the ISO 639-3/RA.
- ISO 639/RA-JAC shall receive periodic reports on the change requests processed by ISO 639-3/RA.
- ISO 639/RA-JAC shall review the work of ISO 639-3/RA so as to ensure that it is carried out in accordance with the terms of this standard.
- When ISO 639-3/RA consults ISO 639/RA-JAC about a proposed inclusion, deletion or change, ISO 639/RA-JAC is obliged to respond within one month.
- ISO 639/RA-JAC shall resolve any questions that arise in relation to ambiguity in the relationships between denotations of code elements from different parts of ISO 639.
